Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: newly added in claim 1, line 6, the term “self-assembled monolayer ink,” which is applied to the surface of the rotatable stamp, has no basis in the specification.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-5, 7-9, 11-12, 19 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The limitation “applying a self-assembled monolayer ink to the surface of the rotatable stamp” is new matter. The specification recites to ink the stamp with alkanethiol or alkylsiloxane ink (page 7, line 10). There is no mention of this ink being a monolayer, nor of it being a self-assembled monolayer. A SAM forms on the gold surface when the stamp is imprinted on the gold. There is no description of forming a SAM on the stamp.

Response to Amendment

The rejection of claim 12 under 35 U.S.C. 112, second paragraph is withdrawn.

The new limitation of a SAM ink is new matter, therefore the specification has been objected to and the claims rejected under 35 U.S.C. 112, first paragraph.

Examiner notes that the new limitation of applying an organic semiconductor layer is obvious. Xia discloses an intermediate product, for which further processing is obvious, such as forming layers for known electronic devices such as organic transistors (see Tanaka et al, U.S. Patent No. 6,060,338). Also note that Kumar discloses to form an organic polymer, which encompasses an organic semiconductor layer (claim 37).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
